

Vasile Drăgan was born in Valea Bolvaşniţa, Caraş-Severin, Romania on 2 February 1950. Since 1965 till 1969 he studied at "Traian Lalescu" Highschool, from Mehadia. In 1974 he was graduated from the Department of Mathematics, University of Bucharest. He received PhD degree in 1979 from University of Bucharest, Romania.

Now he is senior researcher at the Institute of Mathematics "Simion Stoilow" of the Romanian Academy, in Department of Differential Equations and Optimal Control. His research interests are in qualitative theory of differential equations mainly in singular perturbation techniques, stability theory and asymptotic expansions. Also, his current research interests include control theory, singular perturbations techniques in robust control for deterministic and stochastic systems, for finite dimensional and infinite dimensional systems both in time-invariant and time-varying cases, applied mathematics in engineering and finance, differential game theory, filtering.

The Romania Academy awarded him "Gheorghe Lazar" prize in 1994 for the papers published in control field. He is a member of the American Mathematical Society.
